1. Introduction:

1.1 Document Purpose:

This document communicates the business requirements and scope for developing find. The scope of this document is to define the functional and non functional requirements, business rules and other constraints requirements.

1.2 Project Background:

A House rental is a house that can be used temporarily for a period of time with a fee. Renting a house assists people to live in a comfortable house when they do not have access to build their own personal homes/houses or. The individual who want to rent a house/room/apartment/home/flat must first contact the House rental company for the desire House/Home/apartment. This can be done online. At this point, this person has to supply some information such as; dates of rental, and type of house. After these details are worked out .Most companies throughout the industry make a profit based of the type of house that are rented.The rental houses are categorized into modern Homes, Colonial, apartment, Rentals etc. And customers are free to choose any house of their choice based on their purse and availability of such houses at the time of booking

1.3 Aim & Objectives:

- Eco-friendly: The monitoring of the Housing activity and the overall business becomes easy and includes the least of paper work.
- The software acts as an office that is open 24/7.
- It increases the efficiency of the management at offering quality services to the customers.
- It provides custom features development and support with the software.

2. Business Requirements Overview:

The advancement in Information Technology and internet penetration has greatly enhanced various business processes and communication between companies (services provider) and their customers of which Real Estate/House Rentals industry is not left out. This House Rental System is developed to provide the following services:

- Enhance Business Processes: To be able to use internet technology to project the rental company to the global world instead of limiting their services to their local domain alone, thus increase their return on investment.
- Online House/Room Booking: A tool through which customers can book available Rooms/House/Apartment online prior to their date of using the house instead of walking around and asking for a vacant house.
- Customer's registration: A registration portal to hold customer's details, monitor their transaction and used same to offer better and improve services to them and user account where he/she can view her/his details instead of the poor existing systems where only the administrators control their customer details.
- Rentals Notice and Blog: A tool where customers can see and view the details of nearby available House for rent/sale, and also view the current economic design of houses/apartments

3. Functional Requirements Overview:

The NestFind Module is the core of the Property Management System. It is designed for Landlord (Owner of Property) as well as Renter (Tenant) to post property on rent and buy property on rent. Handle all aspects of Landlord to posting their property on rent. This module ensures that renter can easily search the property and booked the property as well as landlord can easily post their property on "NestFind" website.

1. Renter Module
2. Landlord Module
3. Admin Module

3.1 Renter Module

- User can register as a Renter.
- Renter can login to the NestFind System.
- Renter can see properties.
- Renter can search properties based on their preferences
- Renter can book property.
- Renter can pay the rent of property.

3.2 Landlord Module

- Landlord can do registration.
- Landlord can do login to the system.
- Landlord can upload information about their facilities.
- Landlord can upload information about different properties offered.
- Landlord can update the property availability.

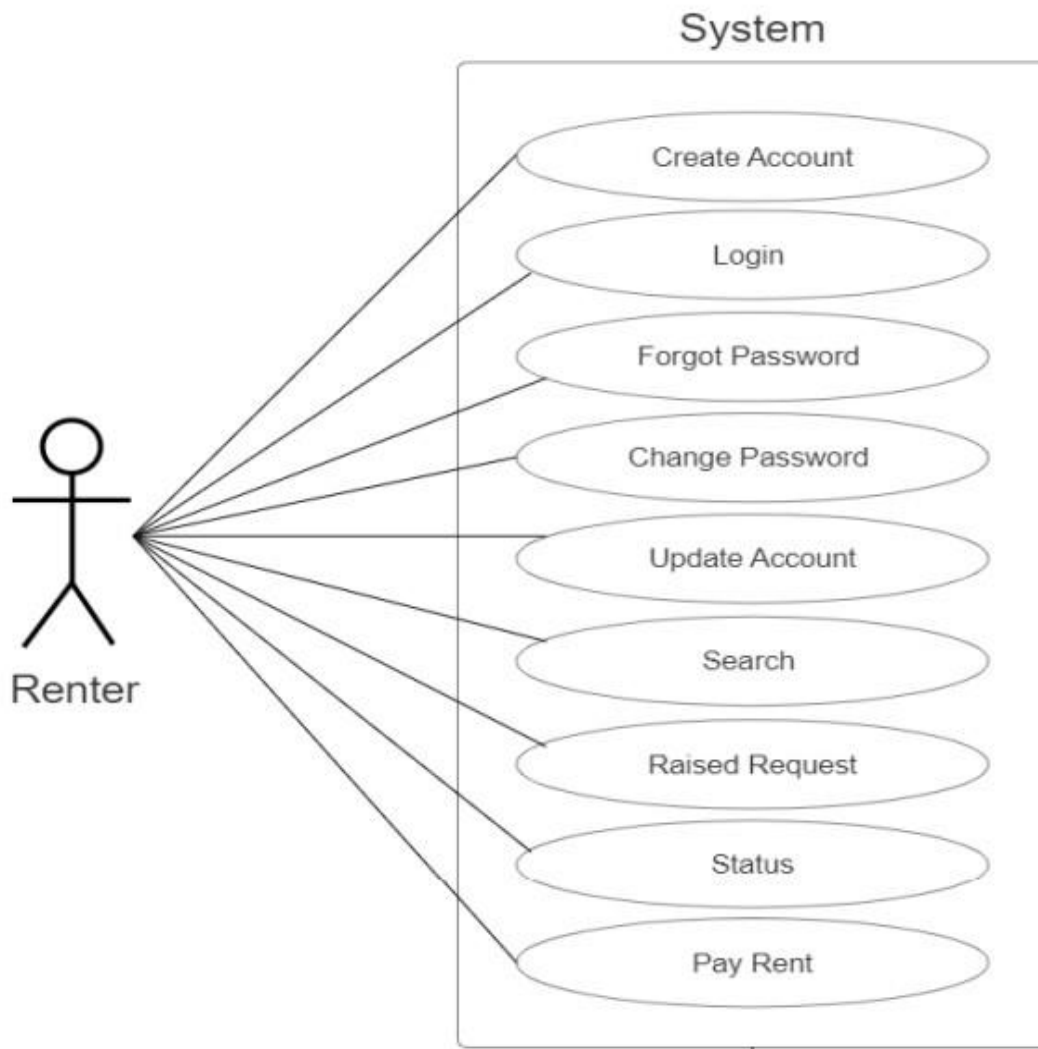

3.3 Admin Module

- Create/update the list of standard tasks.
- Could generate a report about completed servicing tasks.

4. Non-Functional Requirement:

- The website should use professional design, look and feel and color scheme.
- Users will have no limitations for accessing the application through the Internet. The portal being an internet application, it is difficult to specify an exact number of visitors or users. Hence, we will target the system to support sufficient users on the launch of phase 1.
- Being a public website, the site must follow general usability guidelines for menus, navigation, colors, links and other actions provided on the screens.
- The system should be designed in such a manner that the user will be able to complete tasks in a minimum number of steps.

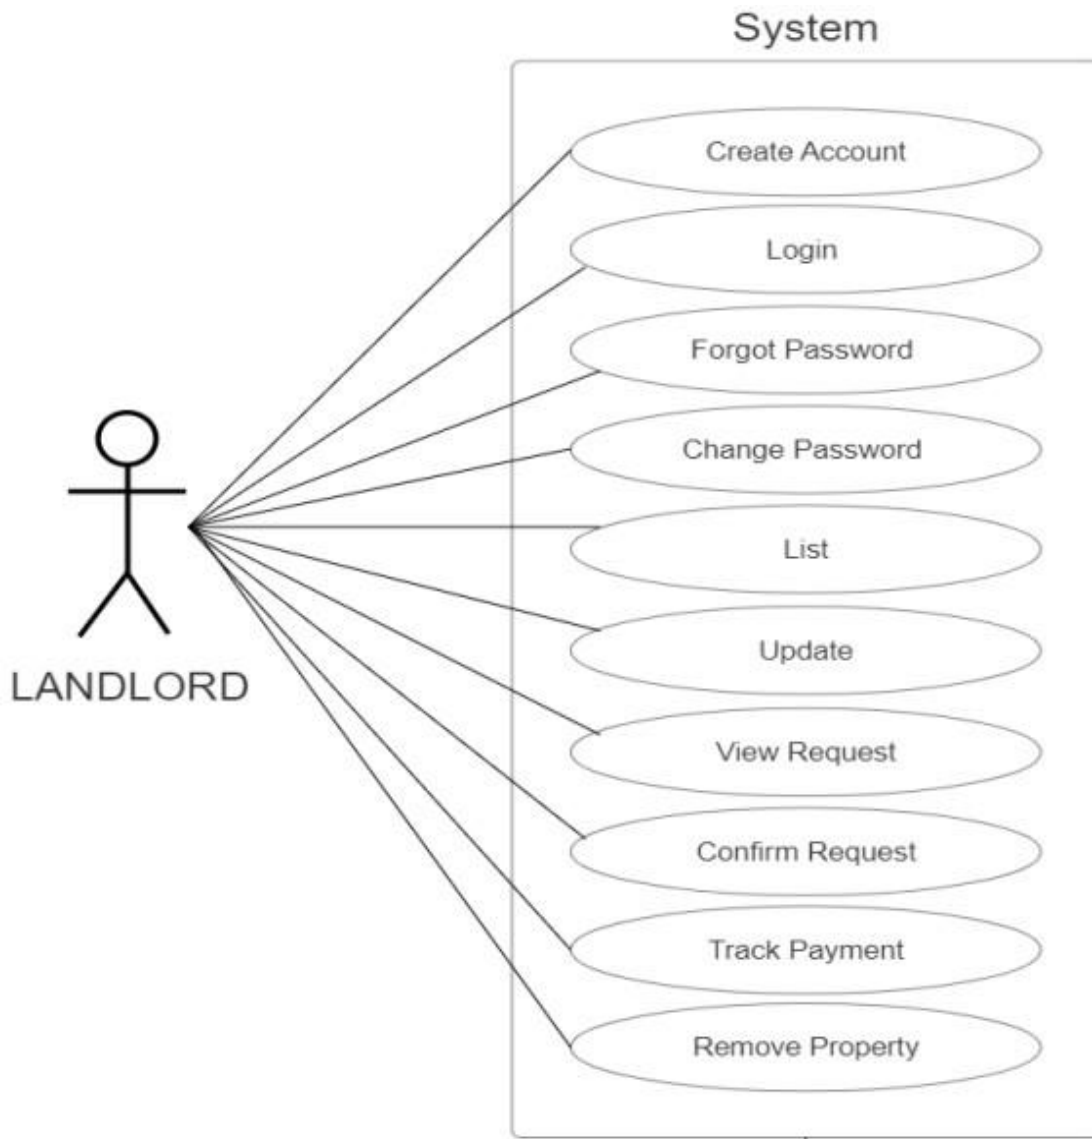

5. Use-Case Diagram

5.1 Renter:

Fig. Use-Case Diagram for Renter

1. In Renter use case diagram Renter is the Actor.
2. Renter can handle following use cases:
 - a. Create Account
 - b. Login
 - c. Forgot Password
 - d. Change Password
 - e. Update Account
 - f. Search
 - g. Raised Request
 - h. Status
 - i. Pay Rent

5.2 Landlord:

Fig. Use-Case Diagram for Landlord

1. In Landlord use case diagram Landlord is the Actor.
2. Landlord can handle following use cases:
 - a. Create Account
 - b. Login
 - c. Forgot Password
 - d. Change Password
 - e. List
 - f. Update
 - f. View Request
 - g. Confirm Request
 - h. Track Payment
 - i. Remove Property

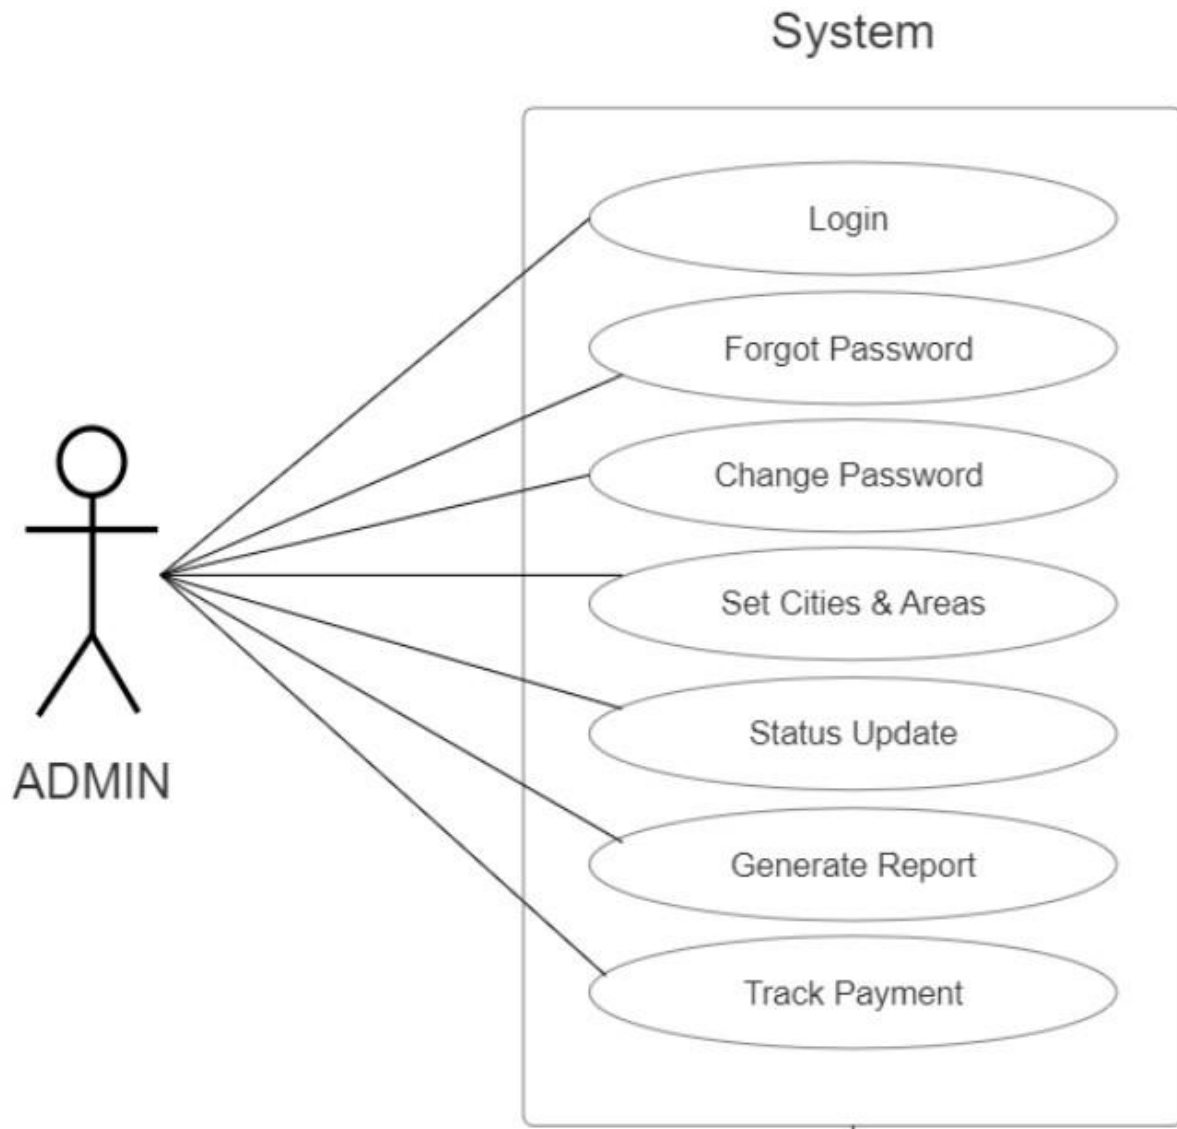

5.3 : Admin :**5.3 Admin**

Fig. Use-Case Diagram for Admin

1. In Admin use case diagram Admin is the Actor.
2. Admin can handle following use cases:
 - a. Login
 - b. Forgot Password
 - c. Change Password
 - d. Set Cities & Areas
 - e. Status Update
 - f. Generate Report
 - g. Track Payment

7. Database Design:

User table:

| Field | Type | Constraints | Description |
|-----------|--------------|-----------------------------|-----------------------------------|
| user_id | Integer | Primary Key, Auto Increment | Unique Renter / Landlord ID |
| firstname | Varchar(255) | Not Null | First name of Renter / Landlord |
| lastname | Varchar(255) | Not Null | Last name of Renter / Landlord |
| role_id | int | Not Null, Foreign Key | Role of User |
| adhar_no | Varchar(45) | Not Null, Unique | Adhar number of Renter / Landlord |
| email_id | Varchar(45) | Not Null, Unique | email id of Renter / Landlord |
| pan_no | Varchar(45) | Not Null, Unique | Pan no of Renter / Landlord |
| mobile | Varchar(45) | Not Null, Unique | Mobile no of Renter / Landlord |
| user_name | Varchar(45) | Not Null, Unique | User name of Renter / Landlord |
| password | Varchar(45) | Not Null | Password of Renter / Landlord |

Booking table:

| Field | Type | Key | Description |
|-------------|--------|-----------------------|------------------------------|
| booking_id | Int | Primary key | Unique ID of Booking |
| property_id | Int | Not Null, Foreign Key | ID of the Booking Property |
| b_date | date | Not Null | Booking date |
| start_date | date | Not Null | Start Date of Rent Agreement |
| end_date | date | Not Null | End Date of Rent Agreement |
| rent_price | double | Not Null | Rent Price |
| deposit | double | Not Null | Deposit of Property |
| pay_id | Int | Not Null, Foreign Key | Payment ID |
| user_id | Int | Not Null, Foreign Key | Renter's User ID |

Amenities table:

| Field | Type | Key | Description |
|----------------|--------------|-------------------------------|------------------------|
| Amenities_id | Int | Primary key, Auto Incremented | Unique ID of Amenities |
| Amenities_name | Varchar(225) | Unique | Name of Amenities |

Area table:

| Field | Type | Key | Description |
|-----------|--------------|-------------------------------|-------------------|
| Area_id | Int | Primary key, Auto Incremented | Unique ID of Area |
| Area_name | Varchar(100) | Not Null | Name of Area |
| Pin_code | Varchar(10) | Uinque | Area Pincode |
| City_id | Varchar(10) | Not Null, Foreign Key | City Id |

City table

| Field | Type | Key | Description |
|-----------|--------------|-------------------------------|-------------------|
| City_id | Int | Primary key, Auto Incremented | Unique ID of City |
| State_id | Int | Not Null, Foreign Key | State ID |
| City_name | Varchar(255) | Not Null | City Name |

Location table:

| Field | Type | Key | Description |
|-------------|--------------|-------------------------------|-----------------------|
| Location_id | Int | Primary key, Auto Incremented | Unique ID of Location |
| Property_id | Int | Not Null, Foreign Key | Property ID |
| Area_id | Int | Not Null, Foreign Key | Area ID |
| Address | Varchar(255) | Not Null | |

Payment table:

| Field | Type | Key | Description |
|----------|--------------|-------------------------------|-------------------|
| Pay_id | Integer | Primary key, Auto Incremented | Unique Payment ID |
| Pay_mode | Varchar(255) | | Mode of Payment |
| Pay_date | date | | Payment Date |
| Amount | double | | Rent Price |

Photos table:

| Field | Type | Key | Description |
|-------------|----------|-------------------------------|--------------------|
| Photo_id | Int | Primary key, Auto Incremented | Photo ID |
| Property_id | Int | Not Null, Foreign Key | Property ID |
| Images | Longblob | | Images of Property |

Property amenities table:

| Field | Type | Key | Description |
|------------------------|------|----------------------------------|-------------------------|
| Property_ameninties_id | Int | Primary key, Auto Incremented | Properties Amenities ID |
| Property_id | Int | Not Null, Foreign Key | Property ID |
| User_id | Int | Not Null, Foreign Key | User ID |

Role table:

| Field | Type | Key | Description |
|-----------|-------------|----------------------------------|--------------|
| Role_id | Int | Primary key, Auto Incremented | Role ID |
| Role_name | Varchar(50) | Not Null | Role of User |

State table:

| Field | Type | Key | Description |
|------------|--------------|-------------|-------------|
| State_id | Int | Primary key | State ID |
| State_name | Varchar(255) | Not Null | State Name |

Property table:

| Field | Type | Key | Description |
|------------------|--------|----------------------------------|------------------|
| Property_id | Int | Primary key, Auto Incremented | Property ID |
| Property_type_id | Int | Not Null, Foreign Key | Type of Property |
| User_id | Int | Not Null, Foreign Key | Landlord User ID |
| Rent_price | Double | Not Null | Rent Price |
| Deposit | Double | Not Null | Deposit Price |
| Location ID | Int | Not Null | Location ID |

Property table:

| Field | Type | Key | Descripti on |
|--------------------|--------------|----------------------------------|-----------------------|
| Property_type_id | Int | Primary key, Auto Incremented | Type of Property |
| Property_type_name | Varchar(255) | Not Null, Foreign Key | Name of Property Name |

10. CONCLUSION AND FUTURE SCOPE

- The NestFind web app has revolutionized the real estate sector by eliminating middlemen, allowing property owners and tenants or buyers to interact directly.
- This approach reduces cost and simplifies the process of renting, buying, or selling properties.
- The platform enhances user experience with features like verified listings, virtual tours, and advanced filtering options, making it a trusted solution for real estate transactions.
- By leveraging technology, it has streamlined what is often a complex and time-consuming process.
